

G.I.D setup instructions.

1. Deal with your antivirus things first. It's hard to tell because there are many antivirus software. Just make sure the bot files will not be taken down by the antivirus software.
2. Install the C++.exe
3. On Bnet app,
 - uncheck "keep me logged in",
 - on game launch, "exit bnet completely".
4. For the following steps, make sure you call out the task manager to see whether day.exe and d2rb.exe are hidden on it.
5. Run day.exe as admin.
 - Add profile of the bot.
 - Name and sche group, type whatever you want.
 - Select the right path of d2r.exe and bot (inside G.I.D folder, \d2rb\).
 - Leave the args blank.
 - Fill in your bot licence key.
 - UNCHECK "don't close bnet".
 - Then confirm.
 - Select that profile you created and "run selected".
6. When day.exe launches the d2r game and bot window, click "stop" in bot window(d2rb.exe).
7. Autoleveling:
 - Mode: gainlevelbot
 - Routine: generic

-“import all”, select from char set folder: blizzard sorc autoleveling 1-90 expansion.

-“basic settings”, “extensions” tab, check these 2 plugins:

- Auto equipment
- Auto stat

-Click “save”.

-Click “start”.

You’re good to go for autoleveling now. =]

8. Farming:

-Start from step 6.

-Mode: farmerBot

-Routine: select the right build you want

-“import all”, from char set folder, choose the farming build you want.

-“basic settings”,

-“protected bags”, select the right areas for your inventory protection.

-“hireling” tab, select none.

-“extensions” tab, make sure all plugins are UNCHECKED.

-“Items and advitems” tabs, modify the things you want the bot to pick up.

-top right “settings”, select the areas you wanna farm in.

-click “start”.

PERFORMING BOT UPDATE:

- login bnet manually and select the original d2r folder on game settings, click "update".

- exit everything.

- update day.exe profiles:
 - copy and paste the settings.json file from the folder of old version to the exact same place of the new version, gid x.xxx>day>settings.json
 - edit the BOT PATH inside the profile or inside the settings.json to the LATEST version of bot. ((((((MOST TRICKIEST PART))))))
- bot character settings update:
 - from the old version folder to the new version:
 - gid x.xxx>d2rb>settings>"your character name" folder

after these steps, you're good to go.
